LinkedIn: linkedin.com/in/ccoolavi | GitHub: github.com/ccoolavi | Portfolio: ccoolavi.github.io/Avishkar

EXECUTIVE PROFILE

Multidisciplinary business and technology leader with a demonstrated record of taking ownership of complex organisational challenges, transforming operational systems and translating business objectives into measurable outcomes. Combines business operations, international enterprise delivery, analytics, engineering, technology architecture and applied artificial intelligence into a distinctive leadership profile.

Experienced in managing interconnected business functions, leading transformation initiatives, developing management intelligence systems, coordinating international enterprise relationships and architecting technology-enabled solutions. Brings the commercial understanding of an operations leader, the analytical discipline of a data professional, the technical fluency of a systems architect and the problem-solving mindset of an engineer.

A consistent career trajectory built around end-to-end ownership: understanding the business problem, identifying structural constraints, designing the operating or technical solution, aligning stakeholders, directing implementation, validating outcomes and ensuring sustained adoption.

Combines international enterprise experience at NielsenIQ with direct responsibility for business operations, process transformation, marketing analytics, automation, AI systems and infrastructure deployment. Comfortable operating across strategic planning, operational execution, technology decisions, commercial considerations and multidisciplinary teams.

Leadership perspective: The ability to connect strategy, people, processes, data and technology is fundamental to sustainable business performance. Focused on building systems that improve organisational effectiveness, strengthen decision-making, eliminate operational friction and create scalable business capabilities.

LEADERSHIP VALUE PROPOSITION

Business & Strategic Leadership

- Translate organisational objectives into executable business strategies, operating priorities and measurable performance outcomes.
- Connect commercial priorities, operational capabilities, resource requirements and technology investments.
- Manage interconnected business functions while balancing cost, capacity, delivery requirements and performance.
- Identify opportunities for business growth, process improvement and organisational effectiveness.

Transformation & Operational Excellence

- Lead business process transformation from diagnosis and solution design through implementation and sustained adoption.
- Establish operating frameworks, SOPs, governance structures, performance metrics and continuous improvement practices.
- Redesign fragmented workflows and introduce automation and digital capabilities to improve business efficiency.
- Address structural process failures rather than relying on repeated downstream corrections.

Technology & AI Leadership

- Identify, architect and implement practical AI and automation opportunities across business environments.
- Evaluate infrastructure, model deployment, integration, performance, privacy and operational economics.
- Bridge business requirements with technical architecture, application development and production deployment.
- Lead AI-augmented implementation processes while retaining accountability for architecture, integration and business outcomes.

Enterprise Delivery & Client Leadership

- Manage international client relationships, enterprise reporting requirements and complex delivery commitments.
- Coordinate cross-functional teams, technical stakeholders, business users and external partners.
- Lead platform migrations, operational transitions, delivery governance and service continuity.
- Translate technical and analytical findings into executive-level recommendations.

Analytics & Decision Intelligence

- Convert business questions into structured analytical approaches and measurable KPIs.
- Establish data-driven reporting, performance dashboards and management decision-support systems.
- Connect commercial, marketing and operational information to actionable business insights.
- Communicate complex findings in clear business language.

People & Organisational Leadership

- Coordinate multidisciplinary teams across technical and business functions.
- Drive resource allocation, work prioritisation, knowledge transfer and accountability.
- Build collaboration between senior stakeholders, technical teams, vendors and operational users.
- Support organisational adoption of new processes, systems and technologies.

SELECTED BUSINESS IMPACT

Business area	Demonstrated impact
Enterprise service delivery	100% on-time delivery against contractual SLAs
Client experience	95% CSAT
International enterprise accounts	Approximately 10–15 client accounts
Platform transformation	Zero migration-related escalations to senior management
Operational transformation	Approximately 70% reduction in manual processing time
Marketing performance	Approximately 45% improvement in cost per lead
Customer acquisition	Approximately 60–70% growth in enquiry/customer acquisition measures
People leadership	6 direct contributors and approximately 20 individuals mentored
AI infrastructure	Deployed GPU-backed inference service with API integration and provider fallback
Technology development	Business applications, operational platforms and published developer tools

CORE EXECUTIVE COMPETENCIES

Business Management: Business strategy, operational planning, P&L visibility, budgeting, commercial prioritisation, resource utilisation, performance management, vendor management and organisational coordination.

Transformation: Enterprise transformation, process engineering, operating model design, continuous improvement, digitalisation, automation, change management, process governance and quality control.

Technology: AI strategy, AI infrastructure, digital systems, cloud architecture, application deployment, API integration, agentic automation and technology implementation.

Enterprise Delivery: Programme management, international client relationships, delivery governance, SLA management, migration planning, operational continuity, risk management and executive reporting.

Analytics: Business intelligence, KPI frameworks, performance measurement, data governance, commercial analytics, marketing analytics, root cause analysis and decision support.

Leadership: Team management, cross-functional coordination, mentoring, stakeholder engagement, executive communication, negotiation, escalation management and organisational learning.

PROFESSIONAL EXPERIENCE

BUSINESS OPERATIONS MANAGER

Sujata Fashions, Pune, India | April 2026 – Present

Scope: Business operations, operational strategy, production, inventory, commercial performance, vendor management, planning, business intelligence and technology systems. Provide integrated operational leadership across business functions, maintaining accountability for execution, resource utilisation, process governance, performance measurement and technology enablement.

Business & Operational Leadership

- Own the interconnected operating environment spanning production, inventory, billing, vendor coordination, business planning and supporting systems.
- Translate business priorities into operational plans, resource requirements, execution priorities and improvement initiatives.
- Maintain visibility into budgets, cost structures, margins and financial performance to support business decisions.
- Lead vendor coordination, negotiations, production scheduling and resource allocation against cost, capacity and delivery requirements.
- Establish and maintain the operating framework through SOPs, process maps, operational checklists and standardized working practices.
- Monitor operational performance and identify structural inefficiencies, dependencies and recurring process failures.
- Drive continuous improvement through scheduled process reviews, corrective actions and sustained performance monitoring.
- Retain ownership of the business automation, AI, analytics and reporting ecosystem, including the infrastructure supporting these capabilities.

Commercial Strategy & Marketing Analytics

- Manage and analyse digital marketing performance across Meta, Google and LinkedIn advertising channels.
- Coordinate measurement through advertising pixels, Google Tag Manager, Google Analytics, LinkedIn Campaign Manager, CRM information and campaign tracking systems.
- Establish performance visibility across cost per lead, customer acquisition cost, enquiry generation, conversion and campaign return.
- Develop management reporting using Power BI, Google Sheets, Apps Script and Python-based data transformation.
- Analyse campaign performance to identify opportunities involving targeting, channel efficiency, budget allocation and customer acquisition.
- Contributed to approximately 45% improvement in cost per lead and 60–70% growth in enquiry/customer acquisition measures across campaign initiatives.
- Translate campaign analytics into actionable commercial decisions and management recommendations.

Technology & Organisational Enablement

- Direct the ongoing development and operational use of business applications, digital workflows and automation systems.
- Align technical implementation with practical business requirements, user adoption and long-term operating needs.
- Coordinate application maintenance, vendor dependencies and improvements across the business technology environment.

OPERATIONS ANALYST & AI SYSTEMS LEAD

Sujata Fashions, Pune, India | August 2024 – March 2026

Scope: Business transformation, operational analytics, AI adoption, technology architecture, application deployment, infrastructure and automation. Led the development and implementation of an integrated transformation programme, combining operational redesign, management intelligence, automation and applied artificial intelligence.

Enterprise Transformation & Operational Excellence

- Led end-to-end transformation across billing and inventory, from current-state assessment and bottleneck identification through future-state design, implementation and sustained adoption.
- Redesigned manual workflows, eliminated redundant activities and introduced structured digital processes.
- Reduced manual processing time by approximately 70% against an instrumented pre-transformation baseline.
- Eliminated a recurring category of transcription errors at source through improved process design and structured information handling.
- Improved the organisation and reliability of month-end reconciliation and operational documentation.
- Established operational KPIs across inventory movement, production throughput, vendor performance and product-line margins.
- Designed management reporting and dashboard structures to improve visibility into operating performance.
- Coordinated technical requirements, delivery priorities, vendor dependencies, implementation milestones, staff training and operational adoption.

AI & Digital Transformation Leadership

- Identified practical AI opportunities across internal knowledge access, documentation, business assistance and workflow automation.
- Designed an internal AI knowledge-assistant architecture using open-weight language models and document-based retrieval.
- Worked with SOPs, vendor terms, product specifications, brand documentation and technical references as knowledge sources.
- Developed retrieval architecture involving document preprocessing, embeddings, vector storage, context selection and prompt design.
- Evaluated local and hosted AI environments according to infrastructure requirements, model compatibility, GPU resources, performance, privacy, data residency and deployment economics.
- Experimented with model configuration and adaptation workflows using open-weight models and associated development ecosystems.
- Developed agentic workflow prototypes with LangGraph, APIs and Model Context Protocol integrations.
- Explored model-driven task planning, tool execution, external system integration and output review.
- Established human-verification practices and basic safeguards for business-facing AI applications.
- Directed AI-assisted implementation workflows by defining system requirements, architecture, technical priorities and acceptance criteria.
- Retained responsibility for architectural decisions, integration behaviour, functional validation and production readiness.

Technology Architecture & Infrastructure

- Designed and coordinated deployment of business applications using FastAPI, PostgreSQL, Redis and supporting services.
- Worked with Docker and Docker Compose to organize reproducible application deployments.
- Managed VPS and cloud infrastructure, Linux/Ubuntu services, systemd, Nginx, DNS, domain configuration and TLS.
- Coordinated database architecture, backend integration, customer-facing interfaces and application deployment.
- Supported architecture planning and deployment of an on-premise learning management system in a Linux environment.
- Delivered three successive production releases, incorporating failure analysis and lessons learned from previous implementations.
- Developed documentation and structured training to support adoption by non-technical employees.
- Maintained ownership of system functionality, deployment requirements and ongoing operational performance.

Programme & Commercial Management

- Managed vendor engagement, implementation dependencies, scheduling, cost assumptions and capacity constraints.
- Evaluated technical and commercial trade-offs affecting delivery, reliability and maintainability.
- Coordinated business users, technical contributors and operational stakeholders through the implementation lifecycle.
- Converted business needs into functioning technology capabilities while maintaining responsibility for their practical business value.

INTERNATIONAL CUSTOMER SUCCESS & ANALYTICS ANALYST

NielsenIQ (NIQ), Pune, India | February 2022 – August 2024

Scope: International enterprise client management, FMCG analytics, proprietary research platforms, business intelligence, platform migration and operational governance. Supported approximately 10–15 international client accounts across North America, Europe and APAC, combining direct account responsibility, enterprise delivery coordination and analytical ownership.

Global Client & Enterprise Delivery

- Managed international client relationships and analytics delivery responsibilities, working with US-based stakeholders and global delivery teams.
- Served as a key point of coordination between clients, analytical delivery functions, product teams and technical stakeholders.
- Maintained 100% on-time delivery and 95% CSAT against contractual service-level expectations across assigned client portfolios.
- Managed concurrent client deliverables, dependencies, delivery priorities and operational commitments across international time zones.
- Prepared client-facing reports, executive presentations, analytical recommendations and delivery updates.
- Facilitated quarterly business reviews and senior stakeholder discussions.
- Translated complex analytical findings into business insights for brand, category and commercial leadership.
- Managed expectations, delivery issues and escalations through to resolution.

Enterprise Platform Operations & Migration

- Worked across NIQ's proprietary Discover and NAD platforms, together with advanced Microsoft Office and Power Automate capabilities.
- Personally handled client configuration, platform setup, data loading, output validation, coverage comparisons, platform monitoring and business-as-usual maintenance.
- Investigated platform-related issues affecting data availability, reporting completeness and client deliverables.
- Played a central role in client-side reporting migration onto NIQ's proprietary Discover platform.
- Coordinated readiness assessments, configuration, data validation, output comparisons, stakeholder communication, user enablement and migration sign-offs.
- Maintained reporting continuity throughout the transition.
- Completed migration activities with zero migration-related escalations to senior management.
- Continued operational support and maintenance following the migration.

Analytics & Business Intelligence

- Managed the analytical lifecycle from business problem definition and data acquisition through preparation, analysis, validation and recommendations.
- Conducted FMCG market, brand, category, market share, competitor, promotional, distribution channel, retailer and consumer behaviour analyses.
- Worked with syndicated market research datasets and client-specific business intelligence requirements.
- Developed Power BI dashboards, client-facing reports and executive analytical presentations.
- Used MS Dynamics CRM information, advanced Excel, Power Query and reporting platforms.
- Standardized client KPI definitions and measurement methodologies, eliminating recurring interpretation disputes that delayed reporting sign-off.
- Performed root cause analysis on data quality and delivery issues and coordinated corrective and preventive actions.
- Used automation and generative AI capabilities to accelerate reporting workflows, insight synthesis and analytical communication.

People & Stakeholder Leadership

- Contributed to analytical work planning, resource utilisation, delivery prioritisation and team coordination.
- Coordinated across client stakeholders, analytical delivery teams, product functions and engineering.
- Supported team knowledge development and documentation to improve reporting consistency and reduce recurring escalations.
- Aligned commercial expectations with platform capabilities and technical delivery requirements.

EXECUTIVE ASSISTANT — BUSINESS OPERATIONS & MANAGEMENT SUPPORT

Sujata Fashions, Pune, India | September 2018 – June 2021

- Supported senior management through business administration, management reporting and cross-functional operational coordination.
- Coordinated interdepartmental handoffs and supported recurring business workflows.
- Developed and maintained internal information systems, filing structures and reporting processes.
- Prepared management reports and presentations to support operational oversight and business decisions.
- Improved information accessibility and administrative workflow consistency.
- Developed detailed working knowledge of organisational processes, stakeholder relationships and operating dependencies.
- Established the practical business understanding that subsequently informed broader operational redesign, digitalisation and technology initiatives.

SELECTED STRATEGIC & TECHNOLOGY INITIATIVES

AI Inference Infrastructure — Oracle Cloud Infrastructure

Designed and deployed an independent GPU-backed AI inference service to support application-level AI capabilities.

- Evaluated self-hosted and cloud infrastructure alternatives before selecting OCI GPU infrastructure.
- Assessed GPU memory, model compatibility, compute capacity, expected throughput and operating economics.
- Designed an API-based architecture for integration with business applications.
- Established a provider-style response structure for standardized inference interactions.
- Designed a primary-provider and backup-provider strategy, enabling applications to switch to an alternate service when the primary inference endpoint fails or exceeds its configured response window.
- Separated inference infrastructure from the main application to support deployment flexibility, maintenance and future model changes.
- Prioritized reliability, practical throughput and cost-effective infrastructure utilization.

Internal AI Knowledge & Agentic Systems

Designed applied AI capabilities for business knowledge retrieval, information access and intelligent workflow assistance.

- Developed document-grounded retrieval architecture using internal business documents and technical references.
- Worked with ChromaDB, document preparation, embeddings, context retrieval and structured prompt design.
- Explored LangGraph and MCP-based agentic workflows connecting models to tools and external systems.
- Evaluated open-weight model deployment strategies across local hardware and cloud environments.
- Incorporated human oversight and basic output-verification principles into business-facing AI workflows.

KaizenPM — Continuous Improvement & Project Management Platform

GitHub: github.com/ccoolavi/project-manager

- Designed a multi-tenant operations platform covering Kaizen problem and solution logging, Kanban workflow management, time tracking and habit tracking.
- Established five-tier role-based access control.
- Directed the system architecture around FastAPI, PostgreSQL and Redis.
- Deployed using Docker Compose on OCI ARM infrastructure.
- Developed 21 backend test modules covering authentication and tenant isolation.
- Conducted a structured deployed-system audit and documented identified issues and remediation.

Developer Quality & Error-Prevention Tools

GitHub: github.com/ccoolavi/secret-guard — Published three JetBrains IDE plugins addressing recurring developer and integration issues:

- Hardcoded credential detection covering nine vendors.
- Apache Airflow version migration compatibility and malformed scheduling.
- LangChain API compatibility across library reorganisations.
- Applied preventive quality principles to identify defects earlier in the development lifecycle rather than allowing errors to propagate downstream.

Billing & Measurement Application

Website: sujatafashion.in

- Developed a progressive web application supporting fashion retail and academy workflows.
- Implemented structured measurement records, a six-stage order processing pipeline, UPI QR billing and export functionality.
- Delivered successive production iterations based on operational requirements and user feedback.
- Integrated application functionality into the wider business operating environment.

ENGINEERING & PRODUCT DEVELOPMENT

Automated Robotic Wheel Replacement System — Final-Year Engineering Capstone | Patent Pending

- Developed an engineering concept focused on reducing manual intervention and vehicle turnaround time.
- Undertook research, requirements analysis, engineering calculations, CAD modelling, simulation, analytical validation, prototyping and practical testing.
- Applied multidisciplinary systems thinking and structured engineering design principles.

BAJA SAE India — Team Durgayans

- Participated in multidisciplinary m-BAJA vehicle development.
- Worked across structural design, engineering calculations, CAD modelling, simulation, fabrication, validation and non-destructive testing.
- Contributed to cross-functional engineering coordination and competition development.
- Team received the Acceleration Award at BAJA SAE India m-BAJA 2021.

PEOPLE & ORGANISATIONAL LEADERSHIP

- Managed six direct contributors and mentored approximately twenty individuals across multidisciplinary project environments.
- Worked with contributors across engineering, design, sales, marketing, analytics and accounts-related functions.
- Supported resource planning, work allocation, execution prioritisation and delivery accountability.
- Promoted knowledge transfer, team enablement and standardised working practices.
- Communicated complex technical and operational requirements to non-technical stakeholders.
- Worked across business management, engineering, delivery and technical implementation environments.

TECHNOLOGY & PROFESSIONAL TOOLKIT

Business & Enterprise Leadership: Business strategy, operational planning, P&L visibility, budgeting, performance management, resource utilisation, vendor management, change management, process governance and continuous improvement.

AI & Digital Transformation: Open-weight language models, retrieval-augmented generation, LangGraph, MCP, ChromaDB, Ollama, LM Studio, llama.cpp, Strata, AI inference architecture, agentic workflows and model configuration.

Cloud & Infrastructure: Oracle Cloud Infrastructure, AWS EC2, Ubuntu/Linux, Docker, Docker Compose, systemd, Nginx, DNS, TLS, VPS administration, API deployment and production monitoring.

Data & Business Intelligence: SQL, Python, pandas, Power BI, DAX, advanced Excel, Power Query, Google Sheets, data transformation, reconciliation, performance analytics and KPI frameworks.

Application Architecture: FastAPI, JavaScript, Node.js, PostgreSQL, SQLite, Redis, SQLAlchemy, Apps Script, REST APIs and relational data modelling.

Enterprise Platforms: Microsoft Dynamics, NIQ Discover, NAD, Power Automate, Microsoft Office, SharePoint, Teams, Salesforce, Jira, Google Analytics, Google Tag Manager and LinkedIn Campaign Manager.

Engineering & Design: MATLAB, Simulink, CAD, mechanical engineering calculations, model-based design, simulation, stress analysis, prototyping and engineering validation.

EDUCATION

BACHELOR OF ENGINEERING — MECHANICAL ENGINEERING
D. Y. Patil College of Engineering & Technology, Pimpri, Pune | 2018 – 2022 | CGPA: 9.47 / 10 | 88.64%

HIGHER SECONDARY — SCIENCE
Nav Maharashtra Junior College, Pimpri, Pune

CERTIFICATION

- Google Data Analytics Professional Certificate.

PROFESSIONAL INTERNSHIPS

PROJECT INTERN — RESEARCH & DEVELOPMENT

Develop Train Maintain LLP, Pune, India | September 2021 – October 2021

- Conducted research and development on energy-efficient mechanical solutions.
- Developed CAD models and engineering drawings for mechanical components and systems.
- Performed simulations and stress analyses to support design optimization.
- Participated in prototyping, functionality testing and engineering documentation.

MODEL-BASED DESIGN INTERN — MECHANICAL SYSTEMS

Decibels Lab, Pune, India | June 2021 – July 2021

- Replicated modelling and simulation environments for mechanical system development.
- Developed mathematical models using MATLAB and Simulink.
- Worked on system dynamics, control strategy, performance optimization and simulation-led validation.
- Documented technical results and worked across mechanical, electrical and control-system interfaces.

ADDITIONAL INFORMATION

Location: Pune, Maharashtra, India
International Exposure: North American, European and APAC client environments
Mobility: Open to global opportunities and international relocation
Professional Portfolio: github.com/ccoolavi | ccoolavi.github.io/Avishkar
